

Potato Paper

Introduction

Potato is a truly unique cryptocurrency project that is community run. Our aim was to stand out in a ocean of dog and cat meme projects so we created a project after a vegetable everyone in the world enjoys eating.

Airdrop Period

When potato first launched we distributed a large amount of it to the community in the form of 100 million potato per community member. We then burn the majority off the remaining amount only keeping a small portion of it to be used for things like exchange listings, farming/stacking functions, ensuring healthy long term growth for the project.

NFT

There are a total of 2500 Potato NFTs that are minted at a price of 1 sol per mint. The NFTs will play a very large and positive role in the greater Potato ecosystem and revenue will be used to ensure the Potato token has healthy positive growth.

Upcoming Projects On Potato

We're currently in the process of researching and creating many different use cases for potato suchs as play-2-earn games using the Potato NFTs as your in-game characters and icons.
